### EXAMINER'S AMENDMENT

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 12/01/2005 has been entered.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

#### In the claims

In claim 1, line 20, "upper polarizer" has been changed to – first polarizer --.

In claim 2, line 5, "the upper" has been changed to – the first --.

In claim 3, line 5, "the upper" has been changed to – the first --.

In claim 4, line 3, "upper polarizer" has been changed to – first polarizer --.

### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

None of the prior art of record discloses or suggests a transfective liquid crystal (LC) panel having the combination of the following features: a) a supertwisted LC layer having twist angle in the range of from 220 to 270 degrees; b) a transfective layer that is disposed on an *inner side* of the second substrate and that reflects and transmits a portion of light incident upon the liquid crystal panel c) wherein, in a pixel in a bright display of the liquid crystal panel, light emitted from the illuminating device and that is incident upon the upper polarizer from the liquid crystal layer is elliptically polarized light, and the product of an optical anisotropy  $\Delta n$  and a thickness  $d$  of the liquid crystal layer,  $\Delta n \cdot d$ , is in a range of from 820 nm to 950 nm; and d) the liquid crystal panel having a directional reflection function which causes light obliquely incident upon the liquid crystal panel to exit mainly in a direction *perpendicular* to the liquid crystal panel rather than in a specular reflection direction.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication should be directed to Tai Duong at telephone number (571) 272-2291.
